

From large-scale transaction processing to customer delivery, banks have leveraged technology to build critical infrastructure that powers their operations end to end. As a result, they have improved service reliability and security through automation, providing a better customer experience and expanding their reach.

Today, giants in the financial technology space, like Paystack and Bank of America, are expanding their scope to harness the power of emerging technologies, such as artificial intelligence. At Bank of America, I hope to utilize my expertise working with AI and building software products to make a significant contribution to its technological expansion, while also strengthening my technical and non-technical expertise and experience in the financial technology space.
